GETFLD (ANS, JTB)

Gets the Magnetic field and put it in the answer array. At GSFC this is a GSFC routine. At MIT this either picks it off the data tape, or puts in a dummy one (0.707, 0.0, 0.707). In either case it can be overwritten. See :hdref refid=FT03..

ARG	DEFINITION	
ANS	R4	ANS array.
JTB(6)	I2	Time array.
