ANSPRT (ANS, JTB, JDAT, JNE, LSTAT, JTLMOD, JCLK, TEMP, IDSRN)

Prints out the answer array on Fortran unit IDSRN. If IDSRN > 0, a formatted output is given. If IDSRN < 0, the answer array is just printed in G format. ANSMAG is a version of ANSPRT for use with NXTMAG when the detailed magnetic field is wanted from SUMMARY tapes. Note that the ANS array is different in this case as is documented in the NXTMAG code.

ARG	DEFINITION	
ANS-TEMP	:hdref refid=STDCALL..	
IDSRN	I4	Control for printing.
