**DUMMY ROUTINES**

The following routines have dummy versions in the MJS libraries. The dummy version of each routine is in a module whose name is a concatenation of D and the routine's name.

| | |
|---|---|
| DDODP | Dummies all plotting.<br>Note that since only one type of plotting can be done,<br>including ODDPLT, DODP, or ENGPLT will automatically<br>exclude the other types of plots. |
| DPLSANL | Dummies out all normal plasma analysis. |
| DMJSFIT | Eliminates the non-linear fitting. |

Note that loading a dummy routine will prevent the loading of the normal routine. Thus, even if the flags are set to do that type of processing, it will be dummied out. Loading a dummy routine both speeds the loading and decreases the required storage.
