PLSBEG

PLSBEG initializes many of the variables used in the plasma analysis. Note that many of the variables can be changed using &PLSNT (:hdref refid=FT02.) which is read in by RUNBEG (:hdref refid=RUNBEG.). At GSFC, the GSFC code reads in &PLSNT in the same manner as RUNBEG. The block data associated with the plasma analysis is also loaded with PLSBEG. Still, PLSBEG must be executed before any plasma analysis is done.
