 - b. Core Catalog Materials

1. INTRODUCTION:

The documentation for this data set was originally on paper, kept in NSSDC's Data Set Catalogs (DSCs). The paper documentation in the Data Set Catalogs have been made into digital images, and then collected into a single PDF file for each Data Set Catalog. The inventory information in these DSCs is current as of July 1, 2004. This inventory information is now no longer maintained in the DSCs, but is now managed in the inventory part of the NSSDC information system. The information existing in the DSCs is now not needed for locating the data files, but we did not remove that inventory information.

The offline tape datasets have now been migrated from the original magnetic tape to Archival Information Packages (AIP's).

A prior restoration may have been done on data sets, if a requestor of this data set has questions; they should send an inquiry to the request office to see if additional information exists.

2. ERRATA/CHANGE LOG:

NOTE: Changes are made in a text box, and will show up that way when displayed on screen with a PDF reader.

When printing, special settings may be required to make the text box appear on the printed output.

MEMORANDUM

TO : AFRL Digitized Solar Activity Data Files
Zurich Sunspot Data Files

DATE: April 25, 1968

FROM : Kenneth Michlovitz *← Km*

SUBJECT: NSSDC Magnetic Tape D-00177

The subject tape contains ^{one} ~~two~~ files. The ~~first~~ file is the AFRL data covering the interval January 1955 through February 1967. All of the fields in the card format (Attachment 1) are not filled in for the complete data interval. Data available are as follows:

<u>Data Type</u>	<u>Interval</u>
Magnetic C Index	January 1, 1955 - February 28, 1967
Magnetic Kp Index ✓	January 1, 1955 - February 28, 1967
Magnetic Ap Index	January 1, 1955 - February 28, 1967
Relative Zurich Sunspot Number	January 1, 1955 - February 28, 1967
Greenwich Sunspot Area (Corrected)	January 1, 1955 - December 31, 1955
Greenwich Sunspot Area of the Central Zone (Corrected)	January 1, 1955 - December 31, 1955
Flare Index (HAO)	December 23, 1955 - December 22, 1959
Green Coronal Line Emission Index (CRPL/ITSA)	January 1, 1956 - December 31, 1959
Solar Flux (10 cm, Ottawa)	November 1, 1956 - November 30, 1960

The second ^{part of} ~~file~~ the tape contains monthly and annual means of Zurich Relative Sunspot Numbers for the interval January 1749 - December 1966. The card format of these is given in Attachment 2.

A copy of the complete listing of the tape is on file in the Computer Services Branch.

PART VII

SOLAR PHYSICS

DATA DESCRIPTION

Solar data available at present through the facilities of the Data Center include relative sunspot numbers, sunspot magnetic field data, calcium plages, coronal line emission indices, flare reports, radio emissions, and solar activity summaries. Data on the ionospheric effects of solar flares are included in Part V of this Catalog. The major contributors of these data are:

Catania Astrophysical Observatory, Italy
High Altitude Observatory, Colorado
Kislovodsk Observatory, USSR
McMath-Hulbert Observatory, Michigan
Mount Wilson Observatory, California
Pic-du-Midi Observatory, France
Rome Astronomical Observatory, Italy
Sacramento Peak Observatory, New Mexico
United States Naval Observatory, Washington, D. C.

SUNSPOT DATA

RELATIVE SUNSPOT NUMBERS

Data include the daily American relative sunspot numbers, R_A , and the provisional daily Zurich relative sunspot numbers, R_Z .

The relative sunspot number is an index of the activity of the entire visible solar disk and is determined each day without reference to preceding days. Each isolated cluster of sunspots is termed a sunspot group, and it may consist of one or a large number of distinct spots whose size can range from 10 or more square degrees of the solar surface down to the limit of resolution. The relative sunspot number is defined as $R = K(10g + s)$, where g is the number of sunspot groups and s is the total number of distinct spots. The constant K (usually less than unity) is a calibration scale factor for the observing instrument and is intended to effect the conversion to the scale originated by R. Wolf in 1849. The counts are made visually with small, suitably protected telescopes.

Final values of R_z appear in the IAU Quarterly Bulletin on Solar Activity, the Journal of Geophysical Research, and Solar-Geophysical Data (a monthly publication of ESSA/ITSA). They usually differ slightly from the provisional values, whereas the American numbers, R_A , are not revised.

Data are available in tabular form for the period of Jan. 1957 through Oct. 1967, and were obtained from Solar-Geophysical Data.

FRAUNHOFER INSTITUT MAPS OF THE SUN

Daily maps of the sun have been received from the Fraunhofer Institut, Freiburg im Breisgau, German Federal Republic. Data include:

1. Sunspots
2. Plages
3. Filaments, prominences, and their sudden disappearances
4. Corona
5. Flares

Data are available for Jan. 1957 through June 1961 and Jan. 1962 through Oct. 1967.

POSITIONS, CLASSIFICATIONS, AND AREAS

Daily total areas of sunspot groups as well as heliographic position, classification, and area of sunspot groups have been received in tabular form from Catania Astrophysical Observatory, Catania, Italy; Rome Astronomical Observatory, Rome, Italy; and U. S. Naval Observatory, Washington, D.C.

Available data are as listed.

<u>Station</u>	<u>Data Available</u>
Catania Astrophysical Observatory	Jan. 1958 - Dec. 1959
Rome Astronomical Observatory	Jan. 1959 - Feb. 1962; Apr. 1962 - Aug. 1966 Oct. 1966 - July 1967
U.S. Naval Observatory	Jan. 1948 - Dec. 1961, Jan. 1964 - May 1965
