1. INTRODUCTION:

The documentation for this data set was originally on paper, kept in NSSDC's Data Set Catalogs (DSCs). The paper documentation in the Data Set Catalogs have been made into digital images, and then collected into a single PDF file for each Data Set Catalog. The inventory information in these DSCs is current as of July 1, 2004. This inventory information is now no longer maintained in the DSCs, but is now managed in the inventory part of the NSSDC information system. The information existing in the DSCs is now not needed for locating the data files, but we did not remove that inventory information.

The offline tape datasets have now been migrated from the original magnetic tape to Archival Information Packages (AIP's).

A prior restoration may have been done on data sets, if a requestor of this data set has questions; they should send an inquiry to the request office to see if additional information exists.

2. ERRATA/CHANGE LOG:

NOTE: Changes are made in a text box, and will show up that way when displayed on screen with a PDF reader.

When printing, special settings may be required to make the text box appear on the printed output.

Dear Sir:

I am enclosing herewith the following Pioneer 10/11 material.

1. A copy of 'Pioneer 10/11 S-Band Occultation Experiment Reduced Data explanatory document'. The document describes tape numbers, I/O formates and the occultation software.

2. Five volumes of hard copy computer listings including plots of Pioneer 10/11 (Jupiter, Io) data files.

3. Two sets of microfilm one microfilm is for Pioneer 10/11 (Jupiter)data files and the other is for Pioneer 10 (IO)data files.

You will also receive Magnetic Tapes directly from JPL tape library. The tape numbers are as follows.

Pioneer 10/11 Radio Occultation Experiment Data

Table of Contents

1. Introduction

The material submitted herewith consists of raw, intermediate, and reduced data from the Pioneer 10/11 S-Band Radio Occultation Experiment, covering data on Jupiter and Io. The following data are provided:

a) Digital raw data	Digital tapes only
b) Data Files	
RPP, DIP1, DIP2, ATMOS (input)	Tapes, listings, and microfilm
ATMOS(output)	Listings and microfilm only

This material is described in detail in subsequent section.

2. Digital Data Tapes

Digital occultation data tapes are prepared by sampling analog spacecraft signal and time from analog recorded tapes. The sample rates are 80,000 samples/sec for Pioneer 10 and Io and 40,000 samples/sec for Pioneer 11. These tapes contain a digital representation of recorded signals received from the spacecraft, the time of reception (UTC) and header information. They are 9-track, 800 BPI tapes with odd parity.

2.1 Format

Digital data tapes for Pioneer 10 and Pioneer 11 are in BCD mode. (odd-parity). Each record on the magnetic tape contains 4096 six-bit binary data words plus 9 six bit BCD words used to identify the time and one header word. The description of information in each record is shown in Table 1.

2.2 List of Digital Data Tapes

Pioneer 10 and Pioneer 11 digital data tapes are listed in Table 2. These tapes are 9-trunk 800 BPI tapes. The tape number is in the second column and the [illegible] for the tape is given in the last column. Pioneer 10 and 11 and Io tapes are listed seperately.

3. Data Files

Pioneer 10 and Pioneer 11 data files are created by Processing Pioneer 10 and Pioneer 11 radio occultation data using the subset of occultation software. A brief description of the software and the files is given below.

Occultation Software: consists of the Computer Programs RPP, DIP1, DIP2 and ATMOS. The functions of these programs are:

RPP removes drift and bias from frequency residuals supplied from open loop data

DIP1 computes refractive bending angle as a function of ray-asymptote distance

DIP2 computes refractivity as a function of radius from center of planet

ATMOS computes atmospheric information (temperature, pressure, etc.) as a function of radius to center of planet

The Data Files described in Section 3.1 are Input/Output files obtained by executing the computer programs RPP, DIP1, DIP2, and ATMOS on the UNIVAC 1108.

The files are written using standard formatted FORTRAN I/O on the UNIVAC 1108 Exec-8 system. The format statements used are given in Section 3.3 according to the identifying number which is used as a label for each record in the detailed descriptions below.

Definitions and types of each variable are also given in Section 3.2. The type of a variable is either Integer, Real or Double Precision.

These files are written on tapes N936 and W058 (both 7-track, 800 BPI) using the tape processor of the 391*LIB. sub-routine library at JPL.

3.1 Occultation Data Tapes

Pioneer 10 and Pioneer 11 (Jupiter and Io) data files, obtained by executing the computer programs RPP, DIP1, DIP2, and ATMOS are discussed below.

3.1.1 Pioneer 10 and 11 (Jupiter) Data Files

The following data files are on tape N936 (7-track, 800 BPI) and are written using the TAPE processor. The sequence in which files are written is as follows:

File Sequence on N936	Description
1	P10 Entry OCEP
2	P10 Exit OCEP
3	P10 Exit OCEP
4	P11 Entry OCEP
5	P11 Exit OCEP

3.1.2 Pioneer 10 (Io) Data Files

The following are IO - Entry and Exit data files. These files are on tape W758 (7-trk, 800 BPI) and are written using TAPE processor. The first file on the tape is Trajectory file which is in a Type 66 format. All other files are in formatted FORTRAN I/O. The sequence in which files are written on tape is as follows:

File Sequence on W758	Description
1	TRAJ IO-entry and IO-exit T/66 Format
2	OCEP IO-entry
3	OCEP IO-exit
4	RPP output file IO-exit
5	DIP1 output file IO-exit
6	DIP2 output file IO-exit
7	File-13 RPP IO-entry
8	File-14 DIP1 IO-entry
9	File-15 DIP2 IO entry for ATMOS old F898 TRAJ
10	TRAJ IO-entry and IO-exit (FORTRAN Format)

3.2 Description of Data Files

The occultation software consists of the computer programs RPP, DIP1, DIP2, and ATMOS. These programs and the description of input/output files for them are given in the following sections.

3.2.1 Residual Processing Program (RPP)

The function of the Residual Processing Program (RPP) is to remove drift and bias from frequency residuals. The RPP program reads the RADIO DATA file produced by the OCEP (Occultation Editing Program) program which consists of time points and corresponding frequency residuals. RPP then computes a polynomial drift function for a user-specified time interval and subtracts this function from the data. RPP then computes the phase differences in cycles and writes an output file consisting of doppler residuals (from which bias and drift has been removed) and amplitude to be used by the DIP1 program.

3.2.1.1 Input File

The input file to be used by RPP is the Radio Occultation data file produced by the OCEP Program. It consists of frequency residuals and power for each time points. This file is in standard formatted FORTRAN I/O and is described as follows. Each line corresponds to one record and the format statement for that record corresponds to the label (e.g. 5*) in section 3.3, definition and type of each variable in the file is also given.

PLTYPE	SCID	PASS	MODE		(Record 1)	1*

XPWR	X-Band power in db.	(real)
XFREQ	X-Band frequency in hertz	(d. p.)
XRES	X-Band frequency residuals in hertz	(d. p.)

3.2.1.2 Output File:

RPP output file consists of doppler residuals (from which bias and drift has been removed) and phase for corresponding time points. The file is written with formatted FORTRAN I/O, and is described as follows:

FLTYPE	SCID	PASS	MODE	(Record 1)	1*
XTR	DSS	IW	FBAND	(Record 2)	1*
F1	F2			(Record 3)	2*
TIME	RESIDUAL	PHASE		(Record 4)	5*

3.2.2 Data Inversion Program No. 1 (DIP1)

The function of DIP1 Program is to compute refractive bending angle, ray asymptote distance, and range from S/C to the center of the planet for each time point. Computation of the above variables are based on the assumptions of the oblateness in the Planet Jupiter. The exact shape of the planet Jupiter is computed by making use of a spherical harmonic representation of the gravity field of Jupiter and radius of curvature at point of ray tangency.

The input and output for DIP1 are described as follows:

3.2.2.1 Input files

Input files to DIP1 are the trajectory file and RPP output file. The RPP output file is described in Secting 3.2.1.2 on Page 7. The trajectory file is described as follows:

3.2.2.1 Trajectory file:

This file is a Trajectory file produced by the Trajectory link of the ODP program and based on the DPTRAJ save and plot tape. The file is dynamically catalogued and assigned to the run. The file is written using formatted FORTRAN I/O, and the format is described as follows:

3.2.3 Data Inversion Program No. 2 (DIP2)

The function of the DIP2 program is to compute refractivity as a function of the radial distance to the center of the planet.

DIP2 reads a file of ray distance and corresponding bending angle (among other parameters) produced by the DIP1 program and inverts this data using the Abel Integral Transform to obtain refractivity versus radius.

3.2.3.1 Input file:

DIP2 input file is same as DIP1 output file. This file is in formatted FORTRAN I/O, and is described on Page 10, Section 3.2.2.3.

3.2.3.2 Output file:

The DIP2 output file is written with formatted FORTRAN I/O. It consists of radius, refractivity, gravity and latitude and is described as follows:

TITLE	SCID	PASS	MODE	(Record 1)	1*
XTR	DSS	IW	FBAND	(Record 2)	2*

GR	gravity value obtained from NALPHA	(d. p.)
LATT	latitude of ray tangent in degrees	(d. p.)

3.2.4 Atmospheric Parameter Program (ATMOS)

The function of the AMTOS program is to compute atmospheric information from the refractivity data produced by the DIP2 Program.

A detailed description of ATMOS can be found in the Mariner Mars 1971 occultation Atmospheric Parameter Program - Program document.

3.2.4.1 Input File

ATMOS input file is the same as DIP2 output file. This file is in formatted FORTRAN I/O and is described on Page 11, Section 3.2.3.2.

3.2.4.2 Output

The output of the ATMOS Program consists of hard-copy computer listings and plots containing the following information:

For all points:

RADIUS (km) REFRACTIVITY (n-units)

with bias removed

For negative refractivity points:

RADIUS (km) REFRACTIVITY (n-units) ELECTRON DENSITY (cm^{-3})

(these data are not reliable below main peak)

For all positive refractivity points:

RADIUS (km) REFRACTIVITY (n-units) TEMPERATURE (^{o}K) PRESSURE (mb)

NUMBER DENSITY (cm^{-3}) MASS DENSITY (gcm^{-3})
