1. INTRODUCTION:

The documentation for this data set was originally on paper, kept in NSSDC's Data Set Catalogs (DSCs). The paper documentation in the Data Set Catalogs have been made into digital images, and then collected into a single PDF file for each Data Set Catalog. The inventory information in these DSCs is current as of July 1, 2004. This inventory information is now no longer maintained in the DSCs, but is now managed in the inventory part of the NSSDC information system. The information existing in the DSCs is now not needed for locating the data files, but we did not remove that inventory information.

The offline tape datasets have now been migrated from the original magnetic tape to Archival Information Packages (AIP's).

A prior restoration may have been done on data sets, if a requestor of this data set has questions; they should send an inquiry to the request office to see if additional information exists.

2. ERRATA/CHANGE LOG:

NOTE: Changes are made in a text box, and will show up that way when displayed on screen with a PDF reader.

When printing, special settings may be required to make the text box appear on the printed output.

PIONEER 10

BACKGROUND SKY TAPE

72-012A-14A PSSB-00011

Tape Format

This dataset has been restored. It originally consisted of two tapes that have been stacked onto one tape. Files 1-45 are from tape 1, and files 46-58 are from tape 2. The DS tape is 9-track, 6250 bpi. The DR tape is a 3480 cartridge. The data were originally written in UNIVAC 1100 36-bit words. They have been converted to ASCII. The DR and DS numbers along with the corresponding D numbers and time spans are as follows:

DR #	DS#	DD#	FILES	TIME SPAN
DR004076	DS004076	DD031029	1-45	04/10/72 - 10/06/73
		DD031028	46-58	05/17/72 - 12/04/72

72-012A-14A

TAPE FORMAT

Each original tape had a header file (files 1 and 46 on the new tape) that containes two header records. The rest of the files are data files and contain one header record, followed by data records.

The header records are fixed length and contain ASCII zero values for any unused space. Each data record is divided into four sectors. Each sector contains 16 header words (items 1-16 on format below), and a variable number of 14-word elements, one for each star in the sector (the number of stars is contained in item 6 of the sector header).

NOTE: The first record of the first header file (file 1 on tape) is missing.

Following is a more detailed description of each part of the tape.

Header file

Record 1:

Item #	Format	Description
1	I5	# of data files on tape (directory file not included)
2	I5	# of days on tape
3	I5	Spacecraft - Pioneer (10 or 11)
4	A6	Day of year map was made DAY/YR
5	A6	Number of this tape
6	A6	Input tape number (ignore)
7	A6	Is input tape corrected (ignore)
8	I5	# of sections for day
9-243	Repeat items 4-8 for each remaining day	Maximum of 48 days

Record 2:

Item #	Format	Description
1	A6	Day of year map was made
2	I5	File # where data is located (directory file not included)
3	I5	Section #
4	F6.2	First look angle in section
5	F6.2	Last look angle in section
6	F6.2	Minimum elongation
7	F6.2	Maximum elongation
8-336	Repeat of items 1-7 for each section of every day	

72-012A-14A

Data File

Record 1: (header record)

Item #	Format	Description
1	A6	Day of year map was made
2	A6	Input tape # (ignore)
3	I5	Section #
4	I5	Start time of observations for this section, hours (GMT)
5	I5	Start time of observations for this section, minutes (GMT)
6	I5	Start time of observations for this section, seconds (GMT)
7	I5	Stop time of observations for this section, hours (GMT)
8	I5	Stop time of observations for this section, minutes (GMT)
9	I5	Stop time of observations for this section, seconds (GMT)
10	A6	Element name containing position data (ignore)
11	F7.2	Right ascension of +z spin axis
12	F7.2	Declination of +z spin axis
13	F7.2	Correction for look angle
14	F7.2	Correction for sector
15	F7.2	Clock angle of equator
16	F7.2	Clock angle of sun
17	F7.2	Cone angle of sun
18	I6	# of stars used to get pointing correction
19	F7.2	Standard deviation of correction for look angle
20	F7.2	Standard deviation of correction fo sector.
21	I5	# of look angles included in this section
22-111	F7.2	Look angles included in this section

72-012A-14A

Data Records (records 2-n):

Item #	Format	Description

Sector Header (written once for each of four sectors in record)

1	F10.2	Right ascension of center of field of view
2	F10.2	Declination of center of field of view
3	F10.2	Elongation angle of sun
4	I6	Sector - azimuthal angle label of field of view
5	F10.2	Look angle - polar angle label of field of view
6	I6	# of stars in field of view
7	F10.2	BP - Blue brightness (Parallel channel) in EDR units.
8	F10.2	RP - Red brightness (Parallel channel) in EDR units.
9	F10.2	BS - Blue brightness (Senkrecht channel) in EDR units.
10	F10.2	RS - Red brightness (Senkrecht channel) in EDR units.
11	F10.2	BPc
12	F10.2	RPc } Brightness after star subtraction and corrected
13	F10.2	BSc } for secular decay in units of S_{10}(V)
14	F10.2	RSc
15	F10.2	BCTOT = BPc + BSc
16	F10.2	RCTOT = RPc + RSc

The individual stars that were subtracted (written once for each star in sector)

17a	I6	Declination of star * 1000 - if 0 bit is set then declination is negative
17b	I6	Right ascension of star * 100
18a	I6	BS of star * 1000
18b	I6	BP of star * 1000
18c	I6	IF1 - Flag denoting stellar anomalies (see section 3)
19a	I6	RS of star * 1000
19b	I6	RP of star * 1000
19c	I6	IF2 - Flag denoting spectral type (see section 3)
20	F10.2	Dwell time
21	F10.2	Vignetting correction for BP channel
22	F10.2	Vignetting correction for RP channel
23	F10.2	Vignetting correction for BS channel
24	F10.2	Vignetting correction for RS channel

pick up from p. 3 of the BST User's Guide following this page.

PIONEER 10/11 BACKGROUND SKY TAPE (BST)

USER'S GUIDE

Experiment:	PIONEER 10/11 STARLIGHT/ZODIACAL LIGHT
NSSDC Experiment #'s:	PIONEER 10-72-012A-14 PIONEER 11-73-019A-15
Principal Investigator:	J. L. Weinberg, Director, Space Astronomy Laboratory State University of New York at Albany Executive Park East, Albany, New York 12203 (518) 457-4134
Co-Investigator:	D. W. Schuerman, Space Astronomy Laboratory
Contents:	1. Tape Specifications and Format 2. Parameter Definitions 3. Coding of Flags Designating Spectral Type 4. Experiment Bibliography

The Background Sky Tape (BST) contains the reduced data of photo-polarimetric measurements of the brightness of the sky as viewed from the deep-space probes Pioneer 10 and 11. The NSSDC will provide the user with the first two papers of a series of articles dealing with the Pioneer 10/11 Starlight/Zodiacal Light Experiment. The first of these defines the scope of the investigation and describes the instrument; the second explains the reduction process leading to the creation of BST. They are referred to in this guide as Paper I and Paper II, respectively.

retyped

Computer Word	Format	Description
20	F	Dwell time.
21	F	Vignetting correction for BP channel.
22	F	Vignetting correction for RP channel.
23	F	Vignetting correction for BS channel.
24	F	Vignetting correction for RS channel.
25-32	F	Repeat computer words 17-24 for second star.
.	F	Repeat computer words 17-24 for each remaining
.	.	star in field of view (8 computer words are
.	F	required per star).
.	F	Repeat computer words 1-16 for sector 2.
.	.	Repeat computer words 17-24 for each star in
.	F	this field of view.
.	F	Repeat computer words 1-16 for sector 3.
.	.	Repeat computer words 17-24 for each star in
.	F	this field of view.
.	F	Repeat computer words 1-16 for sector 4.
.	.	Repeat computer words 17-24 for each star in
.	F	this field of view.

Variable length, Maximum 1664 words.

RECORD 3: Repeat record 2 for sectors 5, 6, 7, 8
. Repeat record 2 for sectors .....
. Repeat record 2 for sectors .....
. Repeat record 2 for sectors .....
RECORD 17: Repeat record 2 for sectors 61, 62, 63, 64

RECORD 18-33: Repeat records 2-17 for next look angle.

RECORD 34-N: Repeat records 2-17 for each remaining (L) look angle in section #1.
N = 16L + 1.

FILE 3: Repeat FILE 2 for section 2.

FILE 4-(M+1): Repeat FILE 2 for each remaining (up to M) section of day.

Repeat files 2-(M+1) for each day.

This tape has a maximum of 49 files, including the directory file.

2. PARAMETER DEFINITIONS

section

Each day's observations of the sky may be broken up into a number of sections (up to 8). The sections are delineated by look angle. Pointing corrections are determined for each section (Paper I - the need for sectioning; Paper II - the pointing of sections).

look angle

The polar angle between the +z spin axis and the pointing direction of the instrument as determined by telemetry (Papers I and II).

elongation

The angle between pointing direction and the sun.

+ z spin axis

That end of the spacecraft spin axis which points toward the earth. If one's thumb points toward + z, the spacecraft spins according to a right-hand rule.

sector

One spacecraft spin is divided into 64 sectors (Paper I).

clock angle

The true azimuthal angle swept out by the spin of the spacecraft. The clock angle is zero at that node of the ecliptic at which the instrument is rotating into the northern hemisphere (Paper II).

cone angle

True polar angle between + z spin axis and pointing of instrument (Paper II).

BP, RP, BS, RS
Parallel
Senkrecht

Note: The EDR (Experiment Data Record) unit is a unit of relative instrument response. All reduction is performed in these units, including star subtraction. Absolute calibration is then applied to the final results.

The radiance reading (in relative or EDR units) as given by the four channels of the imaging photopolarimeter (IPP). The B designation stands for blue, the R for red. The S and P designations represent orthogonal directions of polarization. Define an "instrumental" coordinate system based on a Senkrecht (S) direction, which is parallel to the IPP rotation axis and perpendicular to the spacecraft spin axis, and a direction Parallel (P) to the spacecraft spin axis; i.e., the S vector is along the longer side of the effective field-of-view and the P vector is along the shorter. Assume the light source observed with the IPP is partially plane-polarized. This light can be divided into an unpolarized part, I_u, and a completely plane polarized component, I_{pol}. Let the amplitude of the polarized component be $\vec{E}_{pol}$ where $|\vec{E}_{pol}|^2 = I_{pol}$. If Θ is the angle between the S direction and the plane of polarization, the component of $\vec{E}_{pol}$ in the S direction is $|\vec{E}_{pol}| \cos\Theta$, and the component in the P direction is $|\vec{E}_{pol}| \sin\Theta$. The intensities seen by the S

and P channels are therefore

$I_S = \frac{1}{2} I_u + I_{pol} \cos^2\theta$

$I_P = \frac{1}{2} I_u + I_{pol} \sin^2\theta$

where I_S corresponds to the BS or RS readings and I_P corresponds to the BP or RP readings.

Primary Results

BPC, RPC, BSC, RSC — Stand for corrected values of BP, RP, BS, and RS, respectively. The corrections applied (see Paper II) are:
1) foreground stars have been subtracted,
2) the secular decay of the instrument sensitivity is accounted for,
3) absolute calibration is applied so that each channel reads in $S_{10}(V)$ units:
blue(4360A) : 1 $S_{10}(V)$=1.16x10^{-9} ergs cm^{-2}s^{-1}ster^{-1}A^{-1}
red(6420A) : 1 $S_{10}(V)$ =1.07x10^{-9} ergs cm^{-2}s^{-1}ster^{-1}A^{-1}

BCTOT — The sum of BSC and BPC.

RCTOT — The sum of RSC and RPC.

BP of star
RP of star
BS of star
RS of star — The values that the IPP would read if the star was scanned at a cone angle of 90° (Paper II).

dwell time — That fraction of 1/64 of the spacecraft spin period for which the star spends in the instrumental field of view (Paper II).

vignetting correction — This term, on the average, is near 1. It corrects for the fact that the instrument response varies depending on the position of the stars in the field of view (Paper II).

(B-V) calculated — For some stars, a B-V color index is not available. This index is needed to determine the IPP response to any given star. B-V was therefore calculated from spectral type information as described in Paper II.

Note: The uncertainty (1 standard deviation) in the corrections for look angle and sector significantly influence the quality of the data. If the instrument pointing is not determined accurately, the star subtraction process can introduce large errors. Nominal values for computer words 19 and 20, File 2, Record 1, are 0.15 and 0.40, respectively.

3. CODING OF FLAGS DESIGNATING SPECTRAL TYPE

IF1		IF2	
0	Normal star	0	
1	Moderately reddened	1	Type O
2	Marginal variable	2	B
3	Very reddened	3	A
