1. INTRODUCTION:

The documentation for this data set was originally on paper, kept in NSSDC's Data Set Catalogs (DSCs). The paper documentation in the Data Set Catalogs have been made into digital images, and then collected into a single PDF file for each Data Set Catalog. The inventory information in these DSCs is current as of July 1, 2004. This inventory information is now no longer maintained in the DSCs, but is now managed in the inventory part of the NSSDC information system. The information existing in the DSCs is now not needed for locating the data files, but we did not remove that inventory information.

The offline tape datasets have now been migrated from the original magnetic tape to Archival Information Packages (AIP's).

A prior restoration may have been done on data sets, if a requestor of this data set has questions; they should send an inquiry to the request office to see if additional information exists.

2. ERRATA/CHANGE LOG:

NOTE: Changes are made in a text box, and will show up that way when displayed on screen with a PDF reader.

When printing, special settings may be required to make the text box appear on the printed output.

PIONEER VENUS ORBITER RADIO OCCULTATION ATMOSPHERIC TURBULENCE MTUR/OTUR) EXPERIMENT NSSDC DATA DESCRIPTION

R. Woo and J. W. Armstrong
Jet Propulsion Laboratory

I. Introduction

This document describes the Radio Occultation Atmospheric Turbulence (MTUR/OTUR) Experiment NSSDC data delivery submission. The data are selected time series of received signal amplitude, with time constants chosen to resolve the very rapid amplitude fluctuations associated with radio scintillations caused by temperature fluctuation/turbulence in the Venus atmosphere. It is assumed that trajectory information will be provided separately by the Pioneer Venus Project on SEDR's or in other suitable form.
